## ULTIMATE HEADERS ANNOUNCES LOW-PROFILE EXHAUST CLAMPS

**Berea, Ohio (January 13, 2014)** Ultimate Headers created a stir at the recent Performance Racing Industry Show by introducing its new cast Stainless Steel Low-Profile Exhaust Clamps for 2-1/2- and 3-in. diameter exhaust pipes.

Engineered to help engine or chassis builders, racers and street performance enthusiasts gain ground clearance when joining headers to the exhaust pipes, the new Low-Profile clamps design allows for up to 13 degrees of deflection, making installation easier. The clamps increase ground clearance by up to 50 percent over the traditional 3-bolt pattern connectors. The connectors are particularly useful for applications with frequent engine changes.

Cast from aerospace quality 316L Stainless Steel alloy, the clamps are lightweight, heat-resistant, extremely strong and are easy to install or remove. Each clamp features a robust detachable, claw-style hinge with an ARP 5/16-in. hex-head bolt, washer and nut, and a slip-in back-up mandrel to assure a leak-free, air-tight junction. Each clamp includes two radiused flair tubing stubs of grade 304 Stainless Steel for easier installation.
